Pet's Name: _____

Date: _____

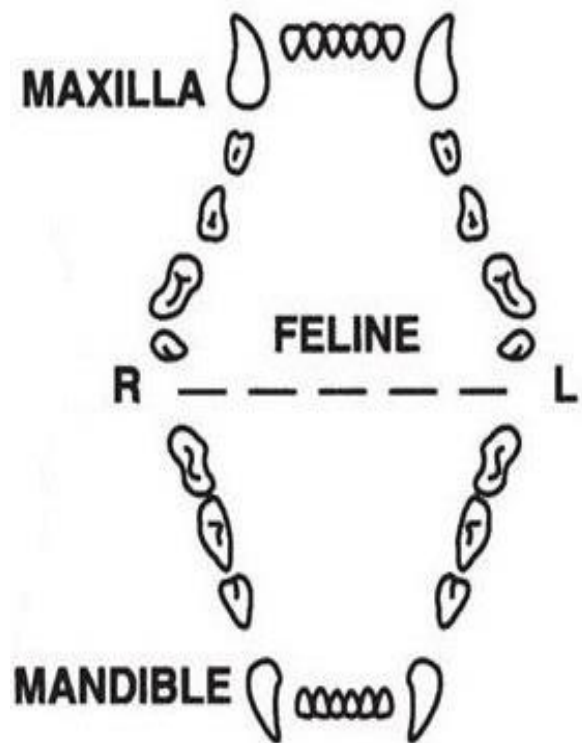

Dental Procedure Related Findings:

- None
- Linear Grooves
- Wear
- Gum Recession
- Abscess
- Mobility
- Slab Fracture

Key: X = Extracted O = Missing

Dental Procedure:

1. Periodontal Disease Stage _____ out of 4.
2. Scaling followed by enamel polishing and rinsing. Finished with fluoride treatment.
3. Your pet's teeth and gums are healthier after the dental cleaning. Accumulation of plaque and tartar causes pressure and inflammation of the gum tissue and the mouth becomes a source of infection for other body tissues. Therefore, it is VERY important to provide home dental healthcare to maintain good oral health.

To ensure your pet's oral care, it is recommended you begin brushing with a finger brushette every 1-3 days. If planning to brush teeth, please wait 5-7 days post dental due to gum sensitivity. To help reduce tartar accumulation can use enzymatic water additive, Hill's t/d as treats, and dental chews.

Home Care Instructions:

1. It is normal for your pet to have a cough 24-48 hour after the dental procedure. This is caused by the endotracheal tube used to deliver oxygen and anesthesia.
2. Please offer $\frac{1}{4}$ to $\frac{1}{2}$ of normal diet this evening. You can resume normal amount of diet and water tomorrow in the A.M. Do not be alarmed if your pet does not want to eat or drink until the following day.
3. Keep your pet warm and comfortable. Keep them away from stairs as they can be a little clumsy from the anesthetic.
4. If extractions were performed, you may notice a bloody saliva discharge coming from the mouth. This should resolve within 2-3 days. If your pet had multiple teeth extractions their food may need to be softened. Place warm water on their normal food and let sit for 10 minutes.
5. If you chose the option for IV fluid therapy, your pet will have a bandage on their front leg. The bandage can be removed about an hour after they get home.
6. If your pet had multiple teeth extractions their food may need to be softened. Place warm water on their normal food and let sit for 10 minutes.
7. If you have any questions or concerns please contact us.
