## **SPAY**

- Give all medication as directed.
- If you chose the option for IV fluid therapy, your pet will have a bandage on their front leg. The bandage can be removed about an hour after they get home.
- Offer your pet a small amount of water 6-8 hours after their procedure. After an hour you may offer them a small amount of food. If your pet experiences vomiting, pick up their food and water and try again in the morning.
- Keep your pet quiet for about 1 week after surgery.
- Dogs should be leashed walked during the first week after surgery.
- The incision should be checked daily keeping watch for redness, discharge, and swelling. If anything is noted, please contact the clinic immediately.
- Do not allow your pet to lick at the incision. E-Collars are available for purchase, to prevent your pet from licking and are highly recommended. If your pet licks, they may remove the sutures prematurely and cause trauma to the area.
- Your pet will NOT need a suture removal. The stitches are dissolvable and placed under the skin.
- If you have any questions or concerns please contact us.
